

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) ~~Apparatus~~An apparatus for receiving a digital information signal comprising at least a first video signal and second video signal, said apparatus comprises:
 - [[-]] receiving means for receiving said digital information signal;
 - [[-]] first retrieval means for retrieving said first video signal from the received digital information signal;
 - [[-]] second retrieval means for retrieving said second video signal from the received digital information signal; and
 - [[-]] signal combination means for combining said first and second video signal so as to obtain a composite video signal suitable for displaying on a display unit, characterized in that the first video signal represents a sequence of images having a first size, and the second video signal representing a sequence of images having a second size, the second size being smaller than the first size of the images, the signal combination means ~~being adapted to combine~~combining the first and second video ~~signal signals~~ while keeping the size of the images corresponding to the second video signal ~~remains~~unchanged.
2. (Currently Amended) ~~Apparatus~~The apparatus as claimed in claim 1, characterized in that the digital information signal further comprises ~~an a~~a parameter signal indicative for the location

where the second video signal has to be overlaid on top of the first video signal, and the apparatus further comprises third retrieval means for retrieving the parameter signal, the signal combination means ~~further being adapted to overlay~~overlaid the second video signal on top of the first video signal in dependence ~~of on~~ said parameter signal.

3. (Currently Amended) ~~Apparatus~~The apparatus as claimed in claim 1, characterized in that the digital information signal is in the form of an MPEG transport stream.

4. (Currently Amended) ~~Apparatus~~The apparatus as claimed in claim 1, characterized in that the digital information signal is recorded on a record carrier, the receiving means ~~being adapted to read~~reading the digital information signal from said record carrier.

5. (Currently Amended) ~~Apparatus~~An apparatus for receiving a first and second video signal, said apparatus comprises:
[[]] first receiving means for receiving said first video signal and a control signal to enable the apparatus to receive said second video signal;
[[]] second receiving means for receiving said second video signal in dependence of said control signal; and

[[]] signal combination means for combining said first and second video signal so as to obtain a composite video signal suitable for displaying on a display unit, characterized in that the first video signal represents a sequence of images having a first size, and the second video signal representing a sequence of images having a second size, the second size being smaller than the first size of the images, the signal combination means ~~being adapted to combine~~ combining the first and second video signal while keeping the size of the images corresponding to the second video signal ~~remains unchanged~~.

6. (Currently Amended) ~~Record~~ A record carrier ~~carrying in the form of a computer-readable medium having a digital information signal recorded thereon~~, the digital information signal comprising a first video signal and a second video signal, characterized in that the first video signal represents a sequence of images having a first size, and the second video signal represents a sequence of images having a second size, the second size of the images being smaller than the first size.

7. (Currently Amended) ~~Record~~ The record carrier as claimed in claim 6, characterized in that the digital information signal further comprises a parameter signal indicative for ~~the a~~ a location where the second video signal has to be overlaid on top of the first video signal when said first and second video signals are to be combined to form a composite video signal.

8. (Currently Amended) Apparatus ~~An apparatus~~ for providing a digital information signal, said apparatus ~~comprises~~comprising:
[[-]] input means for receiving a first video signal and a second video signal, the first video signal representing a sequence of images having a first size r_1
[[-]] signal combination means for combining said first and second video signals so as to ~~obtain from~~ said digital information signal; and
[[-]] output means for providing said digital information signal,
characterized in that the apparatus comprises video processing means for processing the second video signal so as to obtain a processed second video signal representing a sequence of images having a second size, wherein the second size ~~being is~~ is smaller than the first size of the images, the signal combination means ~~being adapted to combine~~ combining the first video signal and the processed second video signal while retaining all video information in the first and processed second video signals so as to ~~obtain from~~ said digital information signal.

9. (Currently Amended) Apparatus ~~The apparatus~~ as claimed in claim 8, characterized in that the output means ~~are adapted to write~~writes the digital information signal ~~on onto~~ a record carrier.
